

Wouldn't it be wonderful...
to bring the Bees and Butterflies back to our community?

Source: www.pollinator.org/pollinators

Wild pollinators such as butterflies and bees are crucial to human survival. Climate change, land development and pesticide use currently threaten their survival, and therefore ours as well. The Butterflyway Project helps people create viable pollinator habitat in neighbourhoods across Canada.

"Did you know that somewhere between 75% and 95% of all flowering plants on the earth need help with pollination? Pollinators provide pollination services to over 180,000 different plant species, more than 1200 crops and that means that one out of every three bites of food you eat is there because of pollinators. Pollinators add billions of dollars to the global economy. In addition to the food that we eat, pollinators support healthy ecosystems that clean the air, stabilize soils, protect from severe weather, and support other wildlife."

How can we help? Studies show that conservation techniques work. If everyone - home owners, local and national governments, and private industry - made the effort we could change the future for pollinators and secure our own.

*We cannot solve our problems with the same thinking we used
when we created them. ~ Albert Einstein*
